

United States Ethnicity – Colors

Assigning Colors

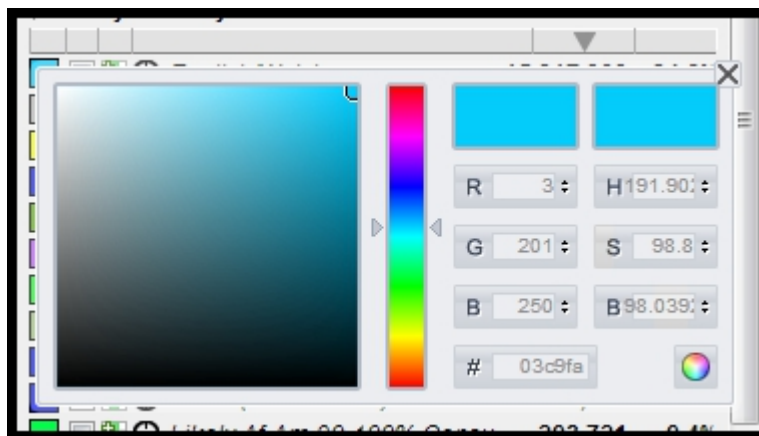

You can change the color of Boundary Lines, and Data Attributes. Changing the color of a Data Attribute will influence Dots/Markers, Choropleth, and Graphs that utilize those features.

1. Find a Data Attribute or Boundary Layer you wish to change colors.
2. To the left of a particular attribute you will see a square box consisting of a color.

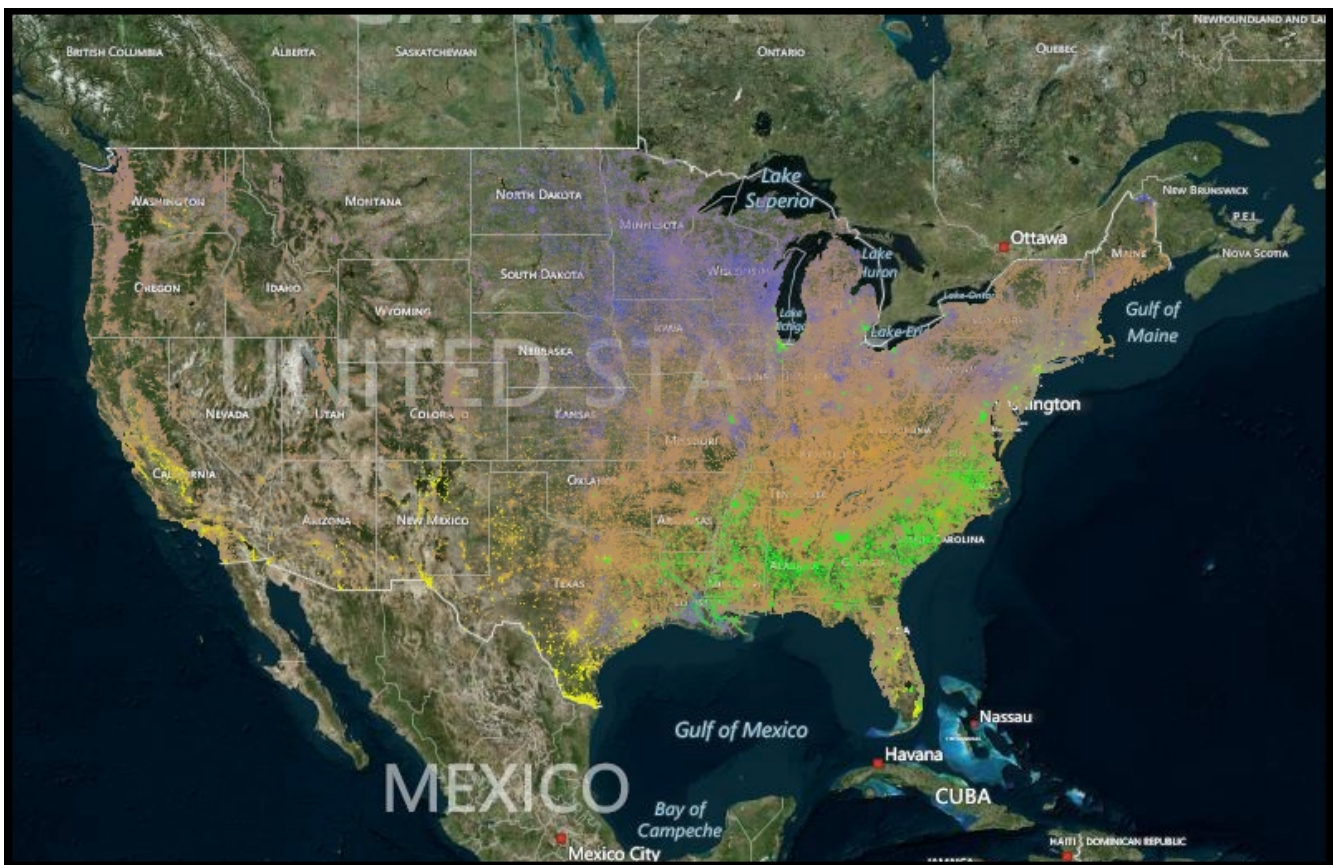

- Click on the box and a window containing a color pallet and scale, RGB and HSB value inputs, and a #hexadecimal box will appear.

- You can use the color pallet and scale, enter RGB/HSB values, or input a hexadecimal value to pick a new color.

5. In the color window, the left color box will display the color you currently have chosen, where as the box contains the original color that is being displayed. As you change the color you will notice the attribute color box will change to match your new color.
6. Once you have selected the color you wish to display the attribute or boundary click on the small [x] at the top right of the pop out window to set the color. The map will then redraw to reflect the changes you made.

7. You can use the “Reset Colors” to change the Data Attribute colors back to their original value. This will not reset any of the Boundary colors.
