

United States Ethnicity – Dots

Dots

When first logging onto United States Ethnicity, the default display for the “Dots” (markers), is set on Likely Ethnicity. This means that the dots you see on the map are being colored according to the Ethnicity color, for the voter they represent.

1. The small layer icon to the left of a data tree indicates which Data Attribute is being used to color the dots/markers. A green layer icon indicates that the Data Source Attributes are being used to color the dots/markers.

Ethnicity					
Broad Ethnic Groupings					
Af-Am Subgroupings					
Likely Ethnicity					
			English/Welsh	55,808,156	34.0%
			Unknown	21,995,494	13.4%
			Hispanic	15,093,552	9.2%
			German	11,313,884	6.9%
			Irish	10,906,717	6.6%
			Scots	8,301,678	5.1%
			African Or Af-A...	6,840,893	4.2%
			Italian	6,161,999	3.8%

- Click a layer icon to bring up a side window containing the Attribute Field Name and a section called "Dots".

4. In this same window there are three Dot display options: Show density, Map dot size, and Transparency.

- **Transparency**– changes the transparency of the dots.
- **Map dot size** – changes the size of the dots.
- **Show density** – Turning Density on makes the dots become more transparent in more rural areas. The transparency of dots is controlled by the population density in an area.
