" An intuitive and grounded approach to economics Get students to think like an Economist using the latest policy and data while incorporating global issues. "Economics, "Twelfth Edition builds on the foundation of the previous edition and retains a thorough and careful presentation of the principles of economics. "Economics" emphasizes real-world applications, the development of critical thinking skills, diagrams renowned for pedagogy and clarity, and path-breaking technology. Each chapter begins with one of today's key issues, and additional issues appear throughout the chapter to show the real-world applications of the theory being discussed. When the chapter concludes, students read between the lines to think critically about a news article relating to the issue, demonstrating how thinking like an economist can bring a clearer perspective to and deeper understanding of today's events. Students will begin to think about issues the way real economists do and learn how to explore difficult policy problems to make more informed decisions in their own economic lives. " This book combines a case study of industrial homework in the electronics industry with a world-systems approach to understanding the role of home-based work in economic development. It spans the period from the nineteenth-century origins of industrial homework to the important role played by home-based work in current strategies of economic restructuring in manufacturing and service industries. The author draws a clear distinction between industrial homework and earlier forms of domestic labor, such as the putting-out system. She also clarifies the important differences between various forms of contemporary home-based work: waged homework in industrial and service occupations, professional telecommuting, home-based self-employment. Moving from the lives of homeworkers themselves to macro-level analyses, Dangler's case study provides a vantage point from which to examine theories of world economic development, theories of labor market segmentation, and recent analyses of the importance of informal sector activities in the modern economy. We study models incorporating money, household production, and investment in housing. Inflation, as a tax on market activity, encourages substitution into household production, and thus investment in household capital. Hence, inflation increases the (appropriately deflated) value of the housing stock. This is documented in various data sources. A calibrated model accounts for a fifth to a half of the observed relationships. While this leaves much to be explained, it demonstrates the channel is economically relevant. We also show models with home production imply higher costs of inflation than models without it, especially when home and market goods are close substitutes. Engaging homework assignments linked to all topics in the textbook for reinforcement and revision Exam questions included to familiarise students with the language of the exam from first year onwards Topic frequency in the Junior Certificate examination listed at the beginning of each chapter Space provided for homework to be graded and for teacher comments Online testing for homework and revision will be available for the Essentials for Living textbook on eTest.ie " Teaches the basic operations of the U.S. economy to students enrolled in the two-term principles course.
