Bacteriologists from all levels of expertise and within all specialties rely on this Manual as one of the most comprehensive and authoritative works. Since publication of the first edition of the Systematics, the field has undergone revolutionary changes, leading to a phylogenetic classification of prokaryotes based on sequencing of the small ribosomal subunit. The list of validly named species has more than doubled since publication of the first edition, and descriptions of over 2000 new and realigned species are included in this new edition along with more in-depth ecological information about individual taxa and extensive introductory essays by leading authorities in the field. Considerations influencing the classification used in this edition of the manual; How bacteria are named and identified; Division I. Protozoa Sachs, 1874, emend. Krassilnikov, 1949; Class I. Schizophyceae Cohn, 1879; Class II. Schizomycetes von Naegeli, 1857; Order 1. Pseudomonadales Orla-Jensen, 1921; Order II. Chlamydochromatiales Buchanan, 1917; Order III. Hyphomicrobiales Douglas, ordo nov; Order IV. Eubacteriales Buchanan, 1917; Order V. Actinomycetales Buchanan, 1917; Order VI. Caryophanales Peshkoff, 1940; Order VII. Beggiatoales Buchanan, ordo nov; Order VIII. Myxobacterales Jahn, 1915; Order IX. Spirochaetales Buchanan, 1918; Order X. Mycoplasmales Freundt, 1955; Class III. Microtubotrites Philip, 1956; Order I. Rickettsiales Buchanan and Buchanan, 1938, emend. Gieszczykiewicz, 1939; Order II. Virales Breed, Murray and Hitchens, 1944. Excerpt from **A Manual of Determinative Bacteriology Preliminary to studies on the bacterial flora of**

cultivated soils, the writer undertook an arrangement of the several hundred species of bacteria already described, with the view of identifying the forms isolated, or at least of determining whether they were new to science. The labor involved in this arrangement has been so great that it was decided to embody the results in the present form that others might have the advantage of them. The writer does not claim that the system of arrangement is perfect or not open to criticism. The best use only could be made of the facts and material available. The present tables serve, therefore, only for purposes of identification, and not necessarily for those of classification. For this reason the present book has been termed a Manual of Determinative, rather than one of Systematic, Bacteriology. To the student working in the laboratory the determination of unknown bacteria has been almost impossible, except with the expenditure of an amount of labor which was impracticable. With the use of the present manual it is believed that the teacher can place a given culture in the hands of his pupil and expect him to determine it, as is done with other organic forms. It is therefore hoped that the present work will serve a useful purpose as a laboratory manual. The chapter on morphology has been appended in order to make clearer the system of classification into orders and genera.
