Examining the influence of gender constructs on the international regime protecting war-affected civilians, R. Charli Carpenter examines how in practice belligerents, advocates and humanitarian players interpret civilian immunity so as to leave adult civilian men and older boys at grave risk in conflict zones. Providing a wealth of ground-breaking case studies, the author argues that in order to understand the way in which laws of war are implemented and promoted in international society we must understand how gender ideas affect the principle of civilian immunity. Each case study demonstrates the importance of assumptions about gender relations in shaping international politics, and in developing a framework for incorporating an attention to gender into the often gender-blind scholarship on international norms. As such, this book will be of interest to international relations theorists and to human rights scholars, students and activists alike. With its light weight and high-performance V-8 engines, Chevrolet's Nova SS was one of the most popular performance cars of the '60s. Nova SS enjoyed its greatest popularity and performance from 1962 to 1972, the period that's the focus of this book. The Nova was a sleeper, a car that might look plain but might also have a powerful Chevy small-block V-8 under its hood. In Nova SS trim, it carried SS (Super Sport) badges that revealed its performance potential and earned it a full measure of respect on the street. This book shows Nova SS models from throughout its decade of glory, including rare models with big-block engines. In most of the developed countries of the World, significant efforts to control the pollution of surface waters have been underway for decades, and particularly the last 10-15 years. These efforts have focused mainly on eliminating or mitigating the effects of point sources of pollution. In many cases, however, it is clear that we have achieved only limited improvement in water quality, and that non-point sources of pollution are going to control any further improvement. It has long been known that urban runoff is a major non-point source, and much research has been done in an attempt to understand the mechanisms and processes which govern this source and to reduce or eliminate its impacts. Many urban jurisdictions have adopted urban runoff pollution control measures, in spite of the fact that there is a great deal that we still do not know, and without really being able to quantify the benefits achieved. A major problem is that while a great deal of work is being done, both in Europe and North America, it is very difficult to keep abreast of new developments. The Urban Water Resources Research Council of the American Society of Civil Engineers has for many years

had as one of its major objectives the transfer of urban runoff technology among researchers and practitioners in the field, as well as to those engineers who are not in the forefront but who nonetheless need the information on the latest developments. This book presents state-of-the-art knowledge concerning water quality in Poland. It offers a wide variety of cases and issues on water resource quality management. The book also presents different methods and strategies to effectively use the most advanced water resource quality problems such as water pollution, whether physical, chemical, or biological, of surface water resources and groundwater resources. The authors pay exceptional attention to water quality monitoring in agricultural, urban catchments, and water reservoirs. More light into the water quality is required to assess water's physicochemical status accurately and plan suitable protection actions against recognized threats. This book addresses the needs of professional engineers, researchers, policy planners, decision-makers, stakeholders, and anyone looking to learn more about the quality situation of water resources in Poland and other similar countries and regions.

Contemporary Security Studies is a uniquely engaging introduction to Security Studies, covering the key theories and contemporary issues in the field. According to the author of this text, global understandings of masculinity and femininity can emerge out of the matrix of international politics. The book, focusing on people who work at home for pay, traces the changing conceptions of gender over the course of the 20th century. This important introduction to feminist International Relations discusses the history, present and future of the field. With a unique format, it examines issues including global governance, the United Nations, war, peace, security, science, beauty and human rights. The internationally recognised methodology for collecting and using R&D statistics, the OECD's Frascati Manual is an essential tool for statisticians and science and innovation policy makers worldwide. It includes definitions of basic concepts, data collection guidelines, and classifications ...

One of the major problems facing practitioners and scientists working with water management is how to integrate knowledge and experiences from scientific, policy and stakeholder perspectives. In this book this science-policy-stakeholder interface (SPSI) is examined both analytically and through the description of practical experiences from river basins in Europe, India and South-East Asia. These include the Tungabhadra (India), Sesan (Vietnam/Cambodia), Tagus (Spain/Portugal) and Glomma (Norway), which particularly highlight issues associated with pollution, severely altered river flows and transboundary conflicts. Following two chapters which lay the framework for the book the authors describe how SPSI was managed in the case study basins and how stakeholder participation and scenarios were used to integrate different perspectives, and to facilitate the communication of different forms of knowledge. Four important aspects of water management and SPSI are then discussed; these are water pollution, land and water interaction, environmental flow and transboundary water regimes. Short descriptions of the case study rivers are provided together with analyses of how SPSI was managed in water management in these basins and policy recommendations for the basins. The book concludes by providing a series of recommendations for improving the science-policy-stakeholder interface in water management. It represents a major step forward in our understanding of how to implement integrated water resources management.

{margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial} There was a time when the Chevrolet Nova was considered a budget option, a model engineered primarily for the price-conscious customer. Certainly performance models were already in Chevrolet's fold. With the Camaro, the Corvette, and the Chevelle leading the way, why would Chevy need another performance model? Well, savvy Chevy customers knew that you could get a really tricked-out Nova right from the factory with SS packages and big-block 396 engines along with performance transmissions and gearing for a fair amount less than an equally equipped Camaro. As a bonus, Novas were lighter weight too. It was the performance bargain of the Chevy lineup. Fast forward to today. The first-generation Camaros cost a small fortune, and while Novas have held their value quite well, they are still a

performance bargain compared to the other Chevy performance models of the era. Not only are they more affordable than Camaros, but you can do a whole lot to make them really fast. In Chevy Nova 1968-1974: How to Build and Modify, veteran author and Chevy expert Wayne Scraba shows you all you need to know to build a killer street or strip Nova. Included is detailed information on driveline upgrades, rear-suspension options for the ultimate hook, front-end suspension and chassis components for good handling and weight transfer, excellent brake upgrades, engine swap options, cooling system upgrades, and more. Focusing on quarter-mile performance, Scraba expertly covers all of your options for a strong-running street Nova, a street-strip combo package, or all-out drag racing options. If you want to build your Nova into a quarter-mile warrior, this book is an essential tool for success. The new reproduction of the book in English. The Manual covers the following models: Vaz 2121 - 1600 VAZ-21213 model - an off-road vehicle, three-door body of all-steel unitary construction, with 1.7 litre carburettor engine VAZ-21214 model - with 1.7 litre Central Fuel Injection Engine VAZ-21214-20 model - with 1.7 litre Sequential Fuel Injection Engine VAZ-21215 model - with Turbo Diesel Engine.

The pursuit to construct "world-class" universities is an ongoing global obsession across the world, which lays emphasis on the development of competitive higher education and research systems as core national economic approach. The portrayal "world-class" is more contextual rather than absolute, the expression "world-class university" has an irrefutable cachet. There is no solo, clear-cut definition of what organises a world-class university (WCU), but there are few common attributes that majority of the experts point towards. The three attributes stated by Philip Altbach and Jamil Salmi that focus on a high concentration of talent, abundant resources and favourable governance have been widely discussed in writings and practice. Both in developing and developed countries, policymakers and higher education leaders are attempting to identify and outline their desires and plans aimed at achieving global ranking for their university/universities. Despite condemnation of the methodology, the choice of indicators and weightings, and the reliability and quality of data used for comparing performance, the obsession for constructing world-class universities has increased over the period of time. But how much do we really discern or comprehend regarding the ranking systems? What do the rankings really measure? Do rankings measure the quality and help in attaining the broad assignment of higher education? Does the competition as outcome of ranking raise standards? Is the ranking system an apposite instrument to frame higher education policies? This edited volume tries to look at the concept of world-class universities in milieu of different countries of the world and explore their experiences either in existing WCUs or constructing WCU or attempting to create WCU. The country-based chapters show differentiated paths of achievements and their approach towards the concept of WCU. This volume presents a selection of the main contributions made to the international conference on Integrated Water Resources Management (IWRM) entitled 'Management of Water in a Changing World: Lessons Learnt and Innovative Perspectives' that was held from 12 to 13 October 2011 in Dresden, Germany. The book summarise the main messages issuing from the conference and contains selected papers which were presented during the conference, either as keynote lectures in plenary sessions or as submitted papers in one of the thematic sessions. The key themes of the book are: Water resources in changing environments Groundwater management Technologies and implementation Water management indicators at different scales Information and decision support systems Water governance: actors and institutions The book provides an overview on important issues concerning the conceptual framework of integrated water resources management (IWRM). All presentations and abstracts and the corresponding PowerPoint presentations as well as a video recording of the panel discussion are available at the conference website <http://www.bmbf.iwrm2011.de>. Readers are encouraged to complete their review of the conference and its messages by consulting this interesting on-line source of accompanying scientific material. Growing pressure from increasingly diverse human activities coupled with climate change impacts threaten the functional integrity of coastal ecosystems around the globe. A multi-disciplinary approach towards understanding drivers, pressures and impacts in the coastal zone requires effective integration of data and information in policy and management, combining expertise from nature and social science, to reach a

balanced and sustainable development of the coastal zone. This important book comprises the proceedings of The International Symposium on Integrated Coastal Zone Management, which took place in Arendal, Norway between 3-7 July 2011. The main objective of the Symposium was to present current knowledge and to address issues on advice and management related to the coastal zone. The major themes of papers included in this book are: Coastal habitats and ecosystem services Adaptation/mitigation to change in coastal systems Coastal governance Linking science and management Comprising a huge wealth of information, this timely and well-edited volume is essential reading for all those involved in coastal zone management around the globe. All libraries in research establishments and universities where marine, aquatic and environmental sciences, and fisheries and aquatic sciences are studied and taught will need copies of this important volume on their shelves. How ecological design emerged in Scandinavia during the 1960s and 1970s, building on both Scandinavia's design culture and its environmental movement. Scandinavia is famous for its design culture, and for its pioneering efforts toward a sustainable future. In *Ecological by Design*, Kjetil Fallan shows how these two forces came together in the late 1960s and early 1970s, when Scandinavian designers began to question the endless cycle in which designed objects are produced, consumed, discarded, and replaced in quick

succession. The emergence of ecological design in Scandinavia at the height of the popular environmental movement, Fallan suggests, illuminates a little-known reciprocity between environmentalism and design: not only did design play a role in the rise of modern environmentalism, but ecological thinking influenced the transformation in design culture in Scandinavia and beyond that began as the modernist faith in progress and prosperity waned. Fallan describes the efforts of Scandinavian designers to forge an environmental ethics in a commercial design culture sustained by consumption; shows, by recounting a quest for sustainability through Norwegian wood(s), that one of the main characteristics of ecological design is attention to both the local and the global; and explores the emergence of a respectful and sustainable paradigm for international development. Case studies trace key connections to continental Europe, Britain, the US, Central America, and East Africa. Today, ideas of sustainability permeate design discourse, but the historical emergence of ecological design remains largely undiscussed. With this trailblazing book, Fallan fills that gap.

Hydroinformatics addresses cross-disciplinary issues ranging from technological and sociological to more general environmental concerns, including an ethical perspective. It covers the application of information technology in the widest sense to problems of the aquatic environment. Hundreds of photos, charts, and diagrams guide readers through the rebuilding process of their small-block Chevy engine. Each step, from disassembly and inspection through final assembly and tuning, is presented in an easy-to-read, user-friendly format. The story of the Soviet Union's cars has to be seen in the context of a planned society in which everything was planned well in advance, and consumer items were not a priority until well after the Second World War. This extraordinarily detailed study charts the history of Soviet cars from the birth of the Soviet Union in 1917 until its demise in 1990, with a conclusion about the post-Soviet era. It is the story of an insular, state-run car industry in which the carefully thought-out ideas of ministerial planners, rather than fickle customers in a free market, determined what cars were made in a country where the open road was often a 300-mile track across a windswept steppe. Eutrophication, the excessive enrichment of waters with nutrients and the associated adverse biological effects, is one of the major environmental problems across Europe. European waters are affected across the whole range from inland water bodies such as groundwater, rivers and lakes, to transitional and coastal waters and ecosystems in open seas.

Eutrophication is caused by large anthropogenic inputs of the nutrients nitrogen (N) and phosphorus (P) to the aquatic environment from a range of societal sectors. This study primarily focuses on the contribution of agriculture to this contamination. This fourth edition of the anthrax guidelines encompasses a systematic review of the extensive new scientific literature and relevant publications up to end 2007 including all the new information that emerged in the 3-4 years after the anthrax letter events. This updated edition provides information on the disease and its importance, its etiology

and ecology, and offers guidance on the detection, diagnostic, epidemiology, disinfection and decontamination, treatment and prophylaxis procedures, as well as control and surveillance processes for anthrax in humans and animals. With two rounds of a rigorous peer-review process, it is a relevant source of information for the management of anthrax in humans and animals.
