Batman's tech has been reimagined and reinvigorated in *Batman v Superman: Dawn of Justice*, the new blockbuster from director Zack Snyder releasing in March 2016. This book takes an exclusive, in-depth look at Batman's arsenal, vehicles, Batsuits, and the iconic Batcave. The new Batmobile design is explored from first concept sketch, through detailed blueprints, all the way to the physical construction of the vehicle itself. *Batman v Superman: Dawn of Justice Tech Manual* is a definitive guide to the weaponry and props created for the movie. It closely examines the Utility Belt, the Batwing, grappling hook and batarang. Everything in the Batcave is explored down to the construction of the set and the graphics from Bruce Wayne's mainframe. This official volume also goes deeper in to the world of *Batman v Superman: Dawn of Justice*,

showcasing Superman's Kryptonian suit and Wonder Woman's iconic weaponry. The official companion book to the new movie, *Batman v Superman: Dawn of Justice Tech Manual*, features interviews with concept artists, the film's weapon's master, the mechanic for the Batmobile, and Zack Snyder himself.

(s15) The purpose of this design manual is to provide restoration practitioners with guidelines for implementing a subset of low-tech tools--namely beaver dam analogues (BDAs) and post-assisted log structures (PALS)--for initiating process-based restoration in structurally-starved riverscapes. While the concept of process-based restoration in riverscapes has been advocated for at least two decades, details and specific examples on how to implement it remain sparse. Here, we describe 'low-tech process-based restoration' as a practice of using simple, low unit-cost, structural additions (e.g. wood and beaver dams) to riverscapes to mimic functions and initiate specific processes. Hallmarks of this approach include: - An explicit focus on the processes that a low-tech restoration

intervention is meant to promote.- A conscious effort to use cost-effective, low-tech treatments (e.g., hand-built, natural materials, non-engineered, short-term design life-spans) because of the need to efficiently scale-up application.- 'Letting the system do the work', which defers critical decision making to riverscapes and nature's ecosystem engineers. The Tech Manual is designed to bridge the chapter content with application in the shop. The Tech Manual to accompany Collision Repair & Refinishing, 2e is designed to work hand-in-hand with the textbook to offer additional opportunities for review and application of the material covered in the book's respective chapters. Work Assignments, Work Orders and Review Questions are included in each of the chapters for a fully rounded approach to learning and applying the chapter content.
