Stories to incorporate in chemistry and science education This work highlights and celebrates the contributions African Americans in the chemical sciences have made, despite racial and gender barriers. Their contributions are often overlooked in media, textbooks, and, consequently, the classroom. By highlighting biographical narratives of African American chemists, this work serves as a tool to address diversity, equity, and inclusion in the classroom and beyond. Lessons plans accompany each chapter, enabling immediate incorporation of these stories into chemistry learning objectives. This work and these tools will help the next generation of chemists see diverse examples of success. This volume provides a comprehensive overview of aquatic redox chemistry through chapters contributed by many of the leading investigators in the field. A humorous overview and history of the Nobel Prizes, generally, and the chemistry prize in particular; who won, and why. Learn the skills you need to succeed in your chemistry course with CHEMISTRY, Tenth Edition. This trusted text has helped generations of students learn to “think like chemists” and develop problem-solving skills needed to master even the most challenging problems. Clear explanations and interactive examples help you build confidence for the exams, so that you can study to understand rather than simply memorize. A New York Times Most Anticipated Book of the Summer A taboo-busting romp through the shame, stink, and strange science of sweating. Sweating may be one of our weirdest biological functions, but it’s also one of our most vital and least understood. In *The Joy of Sweat*, Sarah Everts delves into its role in the body—and in human history. Why is sweat salty? Why do we sweat when stressed? Why do some people produce colorful sweat? And should you worry about Big Brother tracking the hundreds of molecules that leak out in your sweat—not just the stinky ones or alleged pheromones—but the ones that reveal secrets about your health and vices? Everts’s entertaining investigation takes readers around the world—from Moscow, where she participates in a dating event in which people sniff sweat in search of love, to New Jersey, where companies hire trained armpit sniffers to assess the efficacy of their anti-sweat products. In Finland, Everts explores the delights of the legendary smoke sauna and the purported health benefits of good sweat, while in the Netherlands she slips into the sauna theater scene, replete with costumes, special effects, and towel dancing. Along the way, Everts traces humanity’s long quest to control sweat, culminating in the multibillion-dollar industry for deodorants and antiperspirants. And she shows that while sweating can be annoying, our sophisticated temperature control strategy is one of humanity’s most powerful biological traits. Deeply researched and written with great zest, *The Joy of Sweat* is a fresh take on a gross but engrossing fact of human life. Papers from a symposium at the 201st National Meeting of the American Chemical Society, Atlanta, Georgia, April 1991. Among the topics covered in 12 chapters: bulk production by extraction from carbon smoke deposits; carbon-arc synthesis; separation of fullerene mixtures; doping the fullerenes; structural elucidation; conductivity and superconductivity; thermal properties; and metal complexes of fullerenes. The second volume of *NMR Spectroscopy in the Undergraduate Curriculum* continues the work started in the first volume in providing effective approaches for using nuclear magnetic resonance spectrometers as powerful tools for investigating a wide variety of phenomena at the undergraduate level. This volume focuses on first year and organic chemistry courses. The applications and strategies in this volume will be helpful to those who are looking to transform their curriculum by integrating more NMR spectroscopy, to those who might not have considered NMR spectroscopy as a tool for solving certain types of problems, or for those seeking funding for a new or replacement NMR spectrometer. In the nearly 10 years since the publication of the bestselling first edition of *Introduction to Green Chemistry*, interest in green chemistry and clean processes has grown so much that topics, such as fluororous biphasic catalysis, metal organic frameworks, and process intensification, barely mentioned in the first edition, have become major areas of research. In addition, government funding has ramped up the development of fuel cells and biofuels. It reflects the evolving focus from pollution remediation to pollution prevention. Copiously illustrated with over 800 figures, this second edition provides an update from the frontiers of the field. New and expanded research topics: Metal-organic frameworks Solid acids for alkylation of isobutene by butanes Carbon molecular sieves Mixed micro- and mesoporous solids Organocatalysis Process intensification and gas phase enzymatic reactions Hydrogen storage for fuel cells Reactive distillation Catalysts in action on an atomic scale Updated and expanded current events topics: Industry resistance to inherently safer chemistry Nuclear power Removal of mercury from vaccines Removal of mercury and lead from primary explosives Biofuels Uses for surplus glycerol New hard materials to reduce wear Electronic waste Smart growth The book covers traditional green chemistry topics, including catalysis, benign solvents, and alternative feedstocks. It also discusses relevant but less

frequently covered topics with chapters such as Chemistry of Longer Wear and Population and the Environment. This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society. Examines the sources of phenolic antioxidants. Covers the chemical and biological activities of phenolic compounds in food and their health effects, especially the biological properties of phenolic compounds on the modulation of tumor development in experimental animal models, and possibly in humans. Explores flavonoids, green tea, and other phenolic compounds and cancer prevention. Together with Phenolic Compounds in Food and Their Effects on Health I, the volumes represent the most up-to-date studies of the antioxidative and anticarcinogenic activities of phenolic compounds in food. In keeping current with the changing environment, this edition also contains references to many resources on the internet. With this wealth of new information, The ACS Style Guide's Third Edition continues its long tradition of providing invaluable insight on ethics in scientific communication, the editorial process, copyright, conventions in chemistry, grammar, punctuation, spelling, and writing style for any STM author, reviewer, or editor. The Third Edition is the definitive source for all information needed to write, review, submit, and edit scholarly and scientific manuscripts.

"Climate change. Water contamination. Air pollution. Food shortages. These and other global issues are regularly featured in the media. However, did you know that chemistry plays a crucial role in addressing these challenges? A knowledge of chemistry is also essential to improve the quality of our lives. For instance, faster electronic devices, stronger plastics, and more effective medicines and vaccines all rely on the innovations of chemists throughout the world. With our world so dependent on chemistry, it is unfortunate that most chemistry textbooks do not provide significant details regarding real-world applications. Enter Chemistry in Context-"the book that broke the mold." Since its inception in 1993, Chemistry in Context has focused on the presentation of chemistry fundamentals within a contextual framework"-- Organic chemistry courses are often difficult for students, and instructors are constantly seeking new ways to improve student learning. This volume details active learning strategies implemented at a variety of institutional settings, including small and large; private and public; liberal arts and technical; and highly selective and open-enrollment institutions. Readers will find detailed descriptions of methods and materials, in addition to data supporting analyses of the effectiveness of reported pedagogies. This volume explores the significant advances in polymer characterization methodology. Recognized experts in the field present descriptions of unique and new characterization methods. The 26 chapters of the volume are divided into four sections covering polymer fractionation and particle size distribution, dynamic mechanical analysis and rheology, spectroscopy, and morphology. Many chapters report on the combined use of several characterization methods in order to elucidate the relationship between polymer structure-morphology and polymer performance. Green Chemistry - a new approach to designing chemicals and chemical transformations that are beneficial for human health and the environment - is an area that continues to emerge as an important field of study. Practitioners design to be more sustainable the materials, products, and processes that are the basis of our technologically advanced society and economy. Molecular designers are seeing new performance capabilities in the products, new efficiencies in the processes, and achievements in meeting the goals for protecting human health and the environment in a profitable way. Educators have recognized that Green Chemistry principles and practice have not been a part of traditional training in chemistry, and are not part of the skill sets of most practicing chemists. Leaders in Green Chemistry education have developed a wide range of new approaches, courses, tools, and materials that have been introduced and demonstrated in the chemistry curriculum in colleges and universities around the U.S. This ACS Symposium Series Book collects the current research and advances in the field of green chemistry, with an emphasis on providing educators with the knowledge and tools needed to incorporate recent information about this field into the chemistry curriculum. This volume is an outstanding resource for any chemical educator wishing to deepen, broaden, or begin the inclusion of green principles and practices into their teaching or research. Given the current interest in green chemistry, this timely book provides an invaluable snapshot of green chemistry education, highlighting best practices from the first decade of greening the chemistry curriculum. In her latest book Linda Nilson puts forward an innovative but practical and tested approach to grading that can demonstrably raise academic standards, motivate students, tie their achievement of learning outcomes to their course grades, save faculty time and stress, and provide the reliable gauge of student learning that the public and employers are looking for. She argues that the grading system most commonly in use now is unwieldy, imprecise and unnecessarily complex, involving too many rating levels for too many individual assignments and tests, and based on a hairsplitting point structure that obscures the underlying criteria and encourages students to challenge their grades. This new specifications grading paradigm restructures assessments to streamline the grading process and greatly reduce grading time, empower students to choose the level of attainment they want to achieve, reduce antagonism between the evaluator and the evaluated, and increase student receptivity to meaningful feedback, thus facilitating the learning process - all while upholding rigor. In addition, specs grading increases students' motivation to do well by making expectations clear, lowering their stress and giving them agency in determining their course goals. Among the unique characteristics of the schema, all of which simplify faculty decision making, are the elimination of partial credit, the reliance on a one-level grading rubric and the "bundling" of assignments and tests around learning outcomes. Successfully completing more challenging bundles (or modules) earns a student a higher course grade. Specs grading works equally well in small and large class settings and encourages "authentic assessment." Used consistently over time, it can restore credibility to grades by demonstrating and making transparent to all stakeholders the learning outcomes that students achieve. This book features many examples of courses that faculty have adapted to spec grading and lays out the surprisingly simple transition process. It is intended for all members of higher education who teach, whatever the discipline and regardless of rank, as well as those who oversee, train, and advise those who teach. Specification grading promotes the following values and outcomes. It:

1. Upholds High Academic Standards
2. Reflects Student Attainment of Skills and Knowledge
3. Motivates Students to Learn and to Excel
4. Fosters Higher-Order Cognitive Development and Creativity
5. Discourages Cheating
6. Reduces Student Stress
7. Makes Students Feel Responsible for Their Grades
8. Minimizes Conflict Between Faculty and Students
9. Saves Faculty Time and Is Simple to Administer
10. Makes Expectations Clear and Simplifies Feedback for Improvement
11. Assesses Authentically
12. Achieves High Inter-Rater Agreement

Linking OChem to natural products, polymers, pharmaceuticals and more Organic chemistry educators have a critical role in engaging and improving student outcomes at a foundational level. The material in the traditional one-year sequence is foundational for upper level science courses as well as many pre-professional programs, such as medicine. When students are engaged in learning the fundamental concepts in organic chemistry, they are better prepared to apply organic concepts to other applications across chemistry. In this work, authors share methods for engaging students in organic chemistry, including in an online environment. These methods range from creative activities for individual class topics to pedagogical models utilized over an academic year. Laboratory experiments, writing assignments, and innovative assignments are included. "The American Chemical Society has launched an activities-based, student-centered approach to the general chemistry course, a textbook covering all the traditional general chemistry topics but arranged in a molecular context appropriate for biology, environmental and engineering students. Written by industry chemists and educators, Chemistry combines cooperative learning strategies and active learning techniques with a powerful media/supplements package to create an effective introductory text." -- Online description.
