Encyclopedia of Infection and Immunity Dec 18 2022 Encyclopedia of Infection and Immunity provides new insights into the interactions between bacteria, fungi, parasites and their hosts. Specific areas of interest include host cellular and immune response to microbes, molecular mechanisms of action of beneficial microbes or host-associated microbial communities, microbial pathogenesis, virulence factors, experimental models of infection, host resistance or susceptibility, and the generation of innate and adaptive immune responses. Comprised of over 200 chapters written and edited by leading experts in the field, this book will serve as a key resource for students, researchers, academics and industry practitioners in the fields of microbiology, immunology, and infectious diseases. More than 100 years after Robert Koch and Louis Pasteur established the microbial etiology of communicable diseases, the field of microbiology is experiencing a second period of rapid growth and expansion, driven by the realization that changes in host-associated microbial communities might be at the root of a broad spectrum of noncommunicable human diseases. These advances follow on the heels of recent progress in high-throughput sequencing technology, which has provided a wealth of information on the human microbiome and its physiological potential. Offers a contemporary review of current infection and immunity research, and insights into the future direction of the field Meticulously researched and cross-referenced to allow students, researchers and professionals to find relevant information quickly and easily Includes chapters written by academics and practitioners from various fields and regions, ensuring that the knowledge within is easily understood by, and applicable to, a large audience

Suppression and Regulation of Immune Responses Jul 21 2020 This second volume expands upon the previous edition with new research and objectives in

immunoregulation and immune tolerance. Chapters cover topics ranging from new molecular and cellular mechanisms of tolerance; generation and characterization of mice regulatory macrophages; recent advances in the treatment of immune-mediated inflammatory disorders; and novel mechanisms and therapeutic perspectives on food allergies. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, Suppression and Regulation of Immune Responses: Methods and Protocols, Volume II is a great resource for current research and inspiration for new studies in immune tolerance.

Signal Transduction in Cancer and Immunity Feb 14 2020 Signal Transduction in Cancer and Immunity, Volume 361 in the International Review of Cell and Molecular Biology series highlights new advances in the field, with this new volume presenting interesting chapters on a variety of timely topics. Each chapter is written by an international board of authors. Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the International Review of Cell and Molecular Biology series Updated release includes the latest information on signal transduction in cancer and immunity

Advances in Immunity and Cancer Therapy Nov 05 2021 The rapid and continuous upsurge of interesting data in the subject of tumor immunology necessitates the publication of an annual series to furnish the updated materials to the students, researchers, and clinicians in this rapidly advancing field. Concepts and methodologies are ever changing. Also, current research in tumor immunology promises to offer breakthroughs in the future. Important is the need to communicate to the right people the exact role of immunodiagnostic methods and immunolog ical intervention in cancer prevention and treatment. The role of immuno therapy in combination with conventional modalities of treatment needs in its proper perspective. Oncogene, interferon, lympho to be understood kines, monoclonal antibodies, natural killer cells, platelet-mediated cyto toxicity of antibody-coated target cells, suppressor cells, platelet-derived factors, plasma-blocking factors, control of suppressor cell function, ab rogation of plasma-blocking factors, etc. , are some of the areas that are continually advancing. Progress in these areas will have implication in cancer therapy. Further, it is already understood that if immunocompe tence of the host can be maintained at a reasonably good level, there exists the potential to increase the therapeutic indexes of conventional modalities of treatment. This series will attempt to present updated infor mation in all these areas based on contributed and solicited articles. P. K.

Infection and Immunity in Apple Rust Sep 15 2022 This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work.This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work.As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Viruses, Pandemics, and Immunity May 19 2020 How viruses emerge to cause pandemics, how our immune system combats them, and how diagnostic tests, vaccines, and antiviral therapies work. Throughout history, humans have contended with pandemics. History is replete with references to plagues, pestilence, and contagion, but the devastation wrought by pandemics had been largely forgotten by the twenty-first century. Now, the enormous human and economic toll of the rapidly spreading COVID-19 disease offers a vivid reminder that infectious disease pandemics are one of the greatest existential threats to humanity. This book provides an accessible explanation of how viruses emerge to cause pandemics, how our immune system combats them, and how diagnostic tests, vaccines, and antiviral therapies work-- concepts that are a foundation for our public health policies.

Vitamins and the Immune System Jul 13 2022 First published in 1943, Vitamins and Hormones is the longest-running serial published by Academic Press. The Editorial Board now reflects expertise in the field of hormone action, vitamin action, X-ray crystal structure, physiology and enzyme mechanisms. Under the capable and qualified editorial leadership of Dr. Gerald Litwack, Vitamins and Hormones continues to publish cutting-edge reviews of interest to endocrinologists, biochemists, nutritionists, pharmacologists, cell biologists and molecular biologists. Others interested in the structure and function of biologically active molecules like hormones and vitamins will, as always, turn to this series for comprehensive reviews by leading contributors to this and related disciplines. This volume focuses on vitamins and the immune system. Longest running series published by Academic Press Contributions by leading international authorities

Diet, Immunity and Inflammation Aug 22 2020 Although inflammation is one of the body's first responses to infection, overactive immune responses can cause chronic inflammatory diseases. Long-term low-grade inflammation has also been identified as a risk factor for other diseases. Diet, immunity and inflammation provides a comprehensive introduction to immunity and inflammation and the role that diet and nutrition play with regard to this key bodily response. Part one, an introductory section, discusses innate and adaptive immunity, mucosal immunity in a healthy gut and chronic inflammatory diseases and low grade inflammation. Chapters in part two highlight the role of micronutrients, including zinc, selenium, iron, vitamin A and vitamin D, in inflammation and immunity. Part three explores other dietary constituents and includes chapters on intestinal bacteria and probiotics, the impacts of prebiotics on the immune system and inflammation, and antimicrobial, immunomodulatory and anti-inflammatory effects of food bioactive proteins and peptides. Further chapters explore the role of olive oil, short and long chain fatty acids and arginine and glutamine in immune functions. Nutrition, immunity and inflammation are discussed from an integrative and life course perspective in part four. Chapters focus on adverse immune reactions to foods, early nutritional programming, the impact of nutrition on the immune system during ageing, the impact of exercise on immunity and the interaction with nutrition, and the effect that malnutrition has on immunity and susceptibility to infection. With its distinguished editors and international team of expert contributors, Diet, immunity and inflammation is a comprehensive resource for those researching immunology or inflammation, nutrition scientists, and professionals in the food and nutrition industries who require an understanding of the effect that diet can have on the immune system and inflammation. Provides an overview of key research in the important and connected areas of inflammation, infection, overactive immune responses, diseases and diet Outlines the fundamentals of immunity and inflammation and reviews the effects of different food constituents Discusses important related issues, such as ageing and exercise

Topley and Wilson's principles of bacteriology, virology and immunity Apr 10 2022

The New Encyclopaedia Britannica Jun 19 2020

State of Immunity Oct 16 2022 This first comprehensive history of the social and political aspects of vaccination in the United States tells the story of how vaccination became a widely accepted public health measure over the course of the twentieth century. One hundred years ago, just a handful of vaccines existed, and only one, for smallpox, was widely used. Today more than two dozen vaccines are in use, fourteen of which are universally recommended for children. State of Immunity examines the strategies that health officials have used—ranging from advertising and public relations campaigns to laws requiring children to be immunized before they can attend school—to gain public acceptance of vaccines. Like any medical intervention, vaccination carries a small risk of adverse reactions. But unlike other procedures, it is performed on healthy people, most commonly children, and has been mandated by law. Vaccination thus poses unique ethical, political, and legal questions. James Colgrove considers how individual liberty should be balanced against the need to protect the common welfare, how experts should act in the face of incomplete or inconsistent scientific information, and how the public should be involved in these decisions. A well-researched, intelligent, and balanced look at a timely topic, this book explores these issues through a vivid historical narrative that offers new insights into the past, present, and future of vaccination.

Epstein Barr Virus Volume 1 Nov 12 2019 Epstein Barr virus (EBV) was discovered as the first human tumor virus around 50 years ago. Since its discovery

in Burkitt's lymphoma it has been associated with various other malignancies, infectious mononucleosis and even autoimmune diseases. The two book volumes on EBV summarize the first 50 years of research on this tumor virus, starting with historical perspectives on discovery, oncogenicity and immune control, reviewing the role that the virus plays in the various associated diseases and concluding with a discussion on how the immune system keeps persistent EBV infection under control in healthy EBV carriers and can be used to treat EBV associated diseases. The respective 32 chapters are written by international experts from three continents for health care providers, biomedical researchers and patients that are affected by EBV. The assembled knowledge should help to understand EBV associated diseases better and to develop EBV specific vaccination in the near future.

Cytolytic Lymphocytes and Complement Effectors of the Immune System Jan 07 2022 These volumes, Cytolytic Lymphocytes and Complement: Effectors of the Immune System, originate from the realization that pathways of recognition and killings of foreign targets follow similar routes in the humoral and cellular part of the immune system. In particular, the homology of immunoglobins with the T-cell-MHC-antigen receptor at the beginning of the recognition sequence and the homology of complement component C9 with lymphocyte perforin 1 (P1) as pore formers at the end of the effector sequence are striking examples.

Immune System of Animals Oct 04 2021 Applications of nanoparticles to the human life and tools in diagnosis and therapy in field of clinical medicine holds importance and has been an prime focus of biomedical and clinical research for quite sometime, though their application in veterinary medicine is a relatively new focus area of research. Prior to human applications, studies are initially conducted on animals models. Thus toxicity based studies and study of impact of nanoparticles on animal immune system finds importance. In the second volume of the book we discuss the immune system in animals across invertebrates and vertebrate phylas and discuss the impact of nanoparticles in animals life, health, survival and immune system. The book highlights the toxic effects of nanoparticles as environmental pollutants and their adverse impact on animal life forms. Both volumes are also included in a set ISBN 978-3-11-065666-4.

Autophagy: Cancer, Other Pathologies, Inflammation, Immunity, Infection, and Aging May 31 2021 Understanding the importance and necessity of the role of autophagy in health and disease is vital for the studies of cancer, aging, neurodegeneration, immunology, and infectious diseases. Comprehensive and up-to-date, this book offers a valuable guide to these cellular processes whilst inciting researchers to explore their potentially important connections. Volume 5 comprehensively describes the role of autophagy in human diseases, delivering coverage of the antitumor and protumor roles of autophagy; the therapeutic inhibition of autophagy in cancer; and the duality of autophagy's effects in various cardiovascular, metabolic, and neurodegenerative disorders. In spite of the increasing importance of autophagy in the various pathophysiological conditions mentioned above, this process remains underestimated and overlooked. As a consequence, its role in the initiation, stability, maintenance, and progression of these and other diseases remains poorly understood. This book is an asset to newcomers as a concise overview of the diverse disease implications of autophagy, while serving as an excellent reference for more experienced scientists and clinicians looking to update their knowledge. Volumes in the Series

Hot Topics in Infection and Immunity in Children III Mar 17 2020 This volume covers topics in infectious diseases in children and is intended for Pediatric Infectious Disease trainees, trainers, and all those who manage children with infections. There is a balance of clinical basic science. In response to numerous requests, additional tropical topics are covered in some depth. As in previous volumes, the emphasis is on hot topics of clinical relevance delivered by world class speakers.

Topley & Wilson's Principles of Bacteriology, Virology and Immunity Jan 19 2023

Autophagy: Cancer, Other Pathologies, Inflammation, Immunity, Infection, and Aging Sep 22 2020 Volume 6 provides coverage of the mechanisms of regulation of autophagy; intracellular pathogen use of the autophagy mechanism; the role of autophagy in host immunity; and selective autophagy. Attention is given to a number of mechanistic advances in the understanding of regulation, particularly the importance of nutrient availability; microRNAs; and cross-talk with other protein degradation pathways. Intracellular pathogen repurposing of autophagy for pathogenic benefit is also provided, with coverage of Herpesvirus protein modulation of autophagy; the varicella-zoster virus and the maintenance of homeostasis; and the relationship between autophagy and the hepatitis b virus. The significance of autophagy in host defense is elucidated, providing a specific focus on facilitation of antigen presentation; participation in thymic development; and the sharing of regulatory nodes with innate immunity. Selective autophagy for the degradation of mitochondria and endocytosed gap junctions are also explored. This book is an asset to newcomers as a concise overview of the regulation of autophagy, its role in host defense and immunity, and selective autophagy, while serving as an excellent reference for more experienced scientists and clinicians looking to update their knowledge. Volumes in the Series

Autophagy: Cancer, Other Pathologies, Inflammation, Immunity, Infection, and Aging Nov 17 2022 Autophagy: Cancer, Other Pathologies, Inflammation, Immunity, Infection, and Aging is an eleven volume series that discusses in detail all aspects of autophagy machinery in the context of health, cancer, and other pathologies. Autophagy maintains homeostasis during starvation or stress conditions by balancing the synthesis of cellular components and their deregulation by autophagy. This series discusses the characterization of autophagosome-enriched vaccines and its efficacy in cancer immunotherapy. Autophagy serves to maintain healthy cells, tissues, and organs, but also promotes cancer survival and growth of established tumors. Impaired or deregulated autophagy can also contribute to disease pathogenesis. Understanding the importance and necessity of the role of autophagy in health and disease is vital for the studies of cancer, aging, neurodegeneration, immunology, and infectious diseases. Comprehensive and forward-thinking, these books offer a valuable guide to cellular processes while also inciting researchers to explore their potentially important connections. Presents the most advanced information regarding the role of the autophagic system in life and death Examines whether autophagy acts fundamentally as a cell survivor or cell death pathway or both Introduces new, more effective therapeutic strategies in the development of targeted drugs and programmed cell death, providing information that will aid in preventing detrimental inflammation Features recent advancements in the molecular mechanisms underlying a large number of genetic and epigenetic diseases and abnormalities, including atherosclerosis and CNS tumors, and their development and treatment Includes chapters authored by leaders in the field around the globe—the broadest, most expert coverage available

Contemporary Topics in Immunobiology Jul 01 2021 This fourth volume of Contemporary Topics In Immunobiology treats in vertebrate immunity. Specifically, the results represent several approaches to humoral and cellular immunity. It is evident that invertebrates do have function ing immune systems. For example, cellular immunity is characterized by both specificity and memory, but it is still problematical whether vertebrate immune capacity evolved directly from invertebrates. Most of the manuscripts were formally presented at the International Symposium on Invertebrate Pathology, University of Minnesota, August 1972, held in connection with the 25th anniversary celebration of the American Insti tute of Biological Sciences. I wish to express my appreciation to the contributors and to beg their indulgence in what may have been overzealous editing. This was done, though, in the interest of clarity and to seek uniformity. Because of earlier problems, time limitations did not permit consultations between submission of manuscripts and final editing. For assistance, I extend a special note of gratitude to Mrs. Lois Gehringer who unselfishly retyped many of the manuscripts. The preparation of this volume was aided partially by NSF Grant GB17767, two grants from The California Institute for Cancer Research, and a grant from The Brown-Hazen Corporation. E.L.C. Contents Introduction: General Comments and a Note on Taxonomy ..... .

Intradermal Immunization Jan 15 2020 This volume of Current Topics in Microbiology and Immunology covers diverse topics related to intradermal immunization. The chapters highlight the effectiveness of intradermal immunization in experimental animal models or in clinical practice, all supporting the

view that intradermal immunization is at least as good as other immunization routes. Keeping in mind that current vaccines are not specially designed for intradermal immunization, but show comparable efficiency even at reduced dosages, this underlines the great potential for the skin as a vaccination site. Hopefully, the overview in this volume will encourage vaccine designers to focus on this promising immunization route, and in addition, to inspire them to develop vaccines that are especially optimized for intradermal immunization.

Autophagy: Cancer, Other Pathologies, Inflammation, Immunity, Infection, and Aging Oct 24 2020 Understanding the importance and necessity of the role of autophagy in health and disease is vital for the studies of cancer, aging, neurodegeneration, immunology, and infectious diseases. Comprehensive and up-to-date, this book offers a valuable guide to these cellular processes whilst encouraging researchers to explore their potentially important connections. Volume 3 explores the role of autophagy in specific diseases and developments, including: Crohn's Disease, Gaucher Disease, Huntington's Disease, HCV infection, osteoarthritis, and liver injury. A full section is devoted to in-depth exploration of autophagy in tumor development and cancer. Finally, the work explores the relationship between autophagy and apoptosis, with attention to the ways in which autophagy regulates apoptosis, and the ways in which autophagy has been explored in Lepidoptera, elucidating the use of larval midgut as a model for such exploration. From these well-developed foundations, researchers, translational scientists, and practitioners may work to better implement more effective therapies against some of the most devastating human diseases. Volumes in the Series

Topley and Wilson's Principles of Bacteriology and Immunity Aug 14 2022

Physiology and Immune System Dysfunction Jan 27 2021

Current Topics in Microbiology and Immunology Apr 17 2020

Natural Immunity Sep 03 2021 "Natural Immunity" is a broadly-based account of the activities of the evolutionarily conserved molecules, cells and processes of the natural immune system. This encompasses the early host protection against microbes (bacteria and viruses) and tumours, prior to the generation of the adaptive immune response, diverse major current pathologies including inflammatory and autoimmune diseases, and key roles in essential physiological processes such as reproduction and wound healing. The first comprehensive book on natural immunity Reviews new topics, effects of behaviour, aging, and exercise, and diet on natural immunity Highlights the physiological role of natural immunity Focuses on the relationship of the neuroendocrine system with natural immunity Brings together the diversity and complexity of natural immune system activity

The New Encyclopaedia Britannica Mar 29 2021

Immune Intervention Aug 02 2021

Topley and Wilson's Principles of Bacteriology and Immunity. Volume 1 and 2 May 11 2022

Advances in Virus Research Oct 12 2019 Published since 1953, Advances in Virus Research covers a diverse range of in-depth reviews providing a valuable overview of the current field of virology. In 2004, the Institute for Scientific Information released figures showing that the series has an Impact Factor of 2.576, with a half-life of 7.1 years, placing it 11th in the highly competitive category of Virology.

REGULATION OF IMMUNE RESPONSE DYNAMICS Apr 29 2021

Regulation of Immune Response Dynamics Mar 09 2022 First published in 1982: This book has been divided into two volumes; the first focusing primarily on auto-anti-idiotic regulation, and the second primarily on T cell regulation.

Chromatin Remodelling and Immunity Dec 26 2020 Chromatin Remodelling and Immunity, Volume 106, the latest release in the Advances in Protein Chemistry and Structural Biology series is an essential resource for protein chemists. Each volume brings forth new information about protocols and analysis of proteins, with each thematically organized volume guest edited by leading experts in a broad range of protein-related topics. Provides cutting-edge developments in protein chemistry and structural biology Written by authorities in the field Targeted to a wide audience of researchers, specialists, and

students

Principles of Virology, Volume 2 Dec 14 2019 Principles of Virology, the leading virology textbook in use, is an extremely valuable and highly informative presentation of virology at the interface of modern cell biology and immunology. This text utilizes a uniquely rational approach by highlighting common principles and processes across all viruses. Using a set of representative viruses to illustrate the breadth of viral complexity, students are able to under-stand viral reproduction and pathogenesis and are equipped with the necessary tools for future encounters with new or understudied viruses. This fifth edition was updated to keep pace with the ever-changing field of virology. In addition to the beloved full-color illustrations, video interviews with leading scientists, movies, and links to exciting blogposts on relevant topics, this edition includes study questions and active learning puzzles in each chapter, as well as short descriptions regarding the key messages of references of special interest. Volume I: Molecular Biology focuses on the molecular processes of viral reproduction, from entry through release. Volume II: Pathogenesis and Control addresses the interplay between viruses and their host organisms, on both the micro- and macroscale, including chapters on public health, the immune response, vaccines and other antiviral strategies, viral evolution, and a brand new chapter on the therapeutic uses of viruses. These two volumes can be used for separate courses or together in a single course. Each includes a unique appendix, glossary, and links to internet resources. Principles of Virology, Fifth Edition, is ideal for teaching the strategies by which all viruses reproduce, spread within a host, and are maintained within populations. This edition carefully reflects the results of extensive vetting and feedback received from course instructors and students, making this renowned textbook even more appropriate for undergraduate and graduate courses in virology, microbiology, and infectious diseases.

Behavior and Immunity Jun 12 2022 Find out by reading Behavior and Immunity, a new volume that consists of papers presented at the Scientific Meeting of the Australian Behavioral Immunology Group (ABIG) held in November, 1990, at the University of Newcastle, Australia. The ABIG was established in response to the need to provide a forum for the presentation of data and exchange of ideas regarding the concept of brain, behavior, and immunity. The papers presented in this volume represent the state of the art in a number of areas where these interactions have been studied. Information is presented regarding the biochemistry, neurophysiology, and endocrinology of nervous system/immune system interactions; the role of behavioral conditioning in immunity; the effects of sleep and biological rhythms on immune function; the role of lifestyle, life events, and exercise in immunity; and the impact of psychoimmunology in clinical medicine. Researchers in immunology, psychology, neurology; physicians; and lay people with an interest in the interaction between lifestyle and health will find a wealth of information in this stimulating volume.

Cancer Immunology Nov 24 2020 This translational, clinically oriented book describes in detail novel approaches to cancer immunotherapy, current strategies to target tumor immunosuppression, and prognostic biomarkers for personalized cancer treatments. Since the first, very successful edition of the book was published in 2015, the original chapters have been significantly updated and entirely new chapters are included on, for example, cancer immunoprevention, aptamer-mediated cancer gene therapy, haploidentical bone marrow transplantation for pediatric malignancies, and nanoimmunotherapy. The book is published as part of the three-volume Springer series Cancer Immunology, which aims to provide an up-to-date, clinically relevant review of cancer immunology and immunotherapy. Other volumes in the series address the translational medicine context and cancer immunotherapy for organ-specific tumors. Cancer Immunology: Bench to Bedside Immunotherapy of Cancers will be of special value to clinical immunologists, hematologists, and oncologists.
