twistor D-modules and establish their  
fundamental functorial properties. We also  
prove that they can be described as the  
gluing of admissible variations of mixed  
twistor structures. In a sense, mixed  
twistor D-modules can be regarded as a

twistor version of M. Saito's mixed Hodge modules. Alternatively, they can be viewed as a mixed version of the pure twistor D-modules studied by C. Sabbah and the author. The theory of mixed twistor D-modules is one of the ultimate goals in the study suggested by Simpson's Meta Theorem and it would form a foundation for the Hodge theory of holonomic D-modules which are not necessarily regular singular.

mesoporous silica (OMS) materials are a family of silica nanomaterials with pores ranging in size from 2 to 50 nm which are arranged periodically within the silica matrix. They have expanding applications in various fields of research, such as drug delivery, adsorption, separation and catalysis. COK-12 is an OMS produced by the soft-templating method, using the

block copolymer P123 as a structure-directing agent. The synthesis takes place at room temperature under mild reaction conditions. In comparison with the most widely known OMS, the synthesis of COK-12 is more time efficient, inexpensive and environmentally friendly, yielding a material analogous to the well-known SBA-15. This thesis encompasses investigations regarding the production of the ordered mesoporous silica material (OMS) known as COK-12, in terms of upscaling of the synthesis and tailoring of the size and shape of its characteristic hexagonal pore structure. Batch upscaling of the synthesis yielded a material with nearly identical properties to that of the original COK-12. Upscaling of the COK-12 synthesis was also studied in continuous mode. The installation and operation of a continuous COK-12 production unit was carried out with the aim to determine the possibility of large-scale production of COK-12 with consistent material properties. COK-12 was produced in continuous mode by varying the time of aging of the COK-12 slurry and the flow

rate of the feed streams, yielding materials with properties nearly identical to those of the original COK-12. COK-12 was used as a support for the  $\text{Na}_2\text{WO}_4\text{-Mn/SiO}_2$  catalyst for the oxidative coupling of methane reaction in various forms (powder, granular produced by pressing and monolithic), showing promising results comparable to the enhanced activity of the catalyst supported on the SBA-15. The advantage of using COK-12 over other OMS materials is that the facile nature of COK-12 synthesis makes it a viable candidate for industrial production of the  $\text{Na}_2\text{WO}_4\text{-Mn/SiO}_2$  catalyst, if paired with appropriate pelletizing and preparation method. The introduction of hexane and polypropylene glycol (PPG) as micellar swelling agents into the original COK-12 synthesis was studied in order to tailor the mesoporous structure of the system. Hexane was used as a micelle expander and as an agent to produce silica mesocellular foams, with "ink-bottle" shaped pores with a larger diameter than that of the original COK-12. By adding PPG into the synthesis, the shift of the

mesostructure of COK-12 from 2D hexagonal to a multilamellar vesicular configuration was studied, resulting in the progressive formation of this type of material with increasing concentration of PPG. The flexibility of the COK-12 synthesis in terms of upscaling and tailoring of the mesostructure was examined throughout this work, with an aim to contribute to the existing and expanding knowledge regarding more versatile, sustainable and possibly industrial OMS production. Ordered Mesoporous Silica (OMS) gehört zu der Familie der Silica-Nanomaterialien mit periodisch angeordneten Mesoporen im Größenbereich zwischen 2 und 50 nm. Diese werden zunehmend in unterschiedlichen Forschungsfeldern wie Medikamentenfreisetzung, Adsorption, Separation und Katalyse eingesetzt. COK-12 ist ein OMS, das über eine Soft-Templating-Methode unter Nutzung des Blockcopolymers P123 als strukturbestimmenden Zusatz erzeugt wird. Die Synthese erfolgt bei Raumtemperatur unter milden Reaktionsbedingungen. Im Vergleich zu den am weitesten bekannten OMS-Materialien ist

die Synthese von COK-12 zeiteffizient, günstig und umweltfreundlich. Dabei wird ein OMS-Material analog zu dem bereits etablierten SBA-15 erzeugt. Die vorliegende Dissertation umfasst die Synthese eines als COK-12 bekannten OMS-Materials, dem Scale-Up der Synthese sowie die Anpassung und Modifizierung der ursprünglich hexagonal-angeordneten Mesoporen bezüglich Porengrößen und Porenform. Das diskontinuierliche Scale-Up im Batchprozess führt zu nahezu identischen Materialeigenschaften im Vergleich zu dem ursprünglichen COK-12. Ein Scale-Up der COK-12-Synthese wurde zusätzlich im kontinuierlichen Prozess erprobt. Dessen Installation und Operation wurde mit dem Ziel durchgeführt, um die Möglichkeit einer Produktion von großen Mengen an COK-12 mit einheitlichen Materialeigenschaften zu validieren. Durch eine Variation der Alterungszeit als auch der Fließrate der Lösungen konnte COK-12 im kontinuierlichen Prozess mit nahezu identischen Eigenschaften wie das ursprüngliche COK-12 erzeugt werden. COK-12 wurde erfolgreich in verschiedenen

Formen (Pulver, Pressgranulate und Monolithe) als Trägermaterial für  $\text{Na}_2\text{WO}_4\text{-Mn/SiO}_2$ -Katalysatoren für die Oxidative Kopplung von Methan eingesetzt. Die resultierenden Aktivitäten sind vergleichbar mit denen des auf SBA-15-geträgerten Katalysators. Der Vorteil der Nutzung von COK-12 im Vergleich zu anderen OMS-Materialien liegt in der vergleichsweise simplen COK-12-Synthese, weshalb es ein interessanter Kandidat für eine mögliche industrielle Produktion des  $\text{Na}_2\text{WO}_4\text{-Mn/SiO}_2$ -Katalysators ist, wenn geeignete Pelletierungs- und Herstellungsmethoden angewendet werden. Die Zugabe von Hexan und Polypropylenglykol (PPG) zur Aufweitung der Mizellen in der ursprünglichen COK-12-Synthese wurde untersucht, um die mesoporöse Struktur des Systems zu variieren. Hexan wurde eingesetzt zur Aufweitung der Mizellen und als Hilfsmittel zur Produktion mesozellulärer Silica-Schäume mit „ink-bottle“-förmigen Poren sowie vergrößertem Porendurchmesser im Vergleich zu denen des ursprünglichen

COK-12. Durch die Zugabe von PPG in die Synthese verändert sich die Mesoporenstruktur der ursprünglichen hexagonalen 2D-Struktur zu einer multilamellaren vesikulären Anordnung, die mit zunehmender PPG-Konzentration verstärkt wird. Die Flexibilität der COK-12-Synthese wurde in dieser Arbeit in Bezug auf ein Scale-Up und eine Porenmodifikation weitreichend untersucht, mit dem Ziel das existierende Wissen in Bezug auf eine vielseitige, nachhaltige sowie eine potentielle Industrieproduktion der COK-12-Synthese zu entwickeln. Adapun judul penyusunan buku yang penulis pertengahan adalah "Cok Bakal Sesaji Jawa". Dil sözcü?ünü burada dar manada yaln?z günlük-dil olarak de?il, bütün bilimsel ve teknik dilleri ve genel olarak her türlü tabii veya yapma sembol sistemlerini kapsam?n? içine alacak ?ekilde, en geni? manada kullan?yoruz. Genel olarak dili, dilsel olmayan nesnelere söz etmek için kullan?r?z. Örne?in 'Ahmet Ankara'ya gidecek' gibi bir önerme 'Ahmet' adl? bir insan ile Ankara ?ehri hakk?ndad?r. Ancak dili baz? hallerde dilsel olmayan nesnelere de?il de, bir takım dilsel deyimlerden söz etmek için de kullan?r?z. Örne?in bir dil bilgininin, ara?t?rmalar?n?n sonuçlar?n? dilsel deyimler hakk?nda olan önermelerle

ifade edeceđi meydanadadır. Örnekte, dilsel deyimlerden söz etmeye yarayan bir dile "üst dil (metalanguage), bir üst dil yardımıyla sözü edilen dile ise "nesne dili" (object language) denir. Buna göre semiotiğin konusu olan diller, nesne dilleri olup semiotiğin kendisi hep üst dil seviyesinde kalır. Verilen bir nesne dilinin yalnız sentaksın ifade etmeye yarayan bir üst dile "sentaktik üst dil" semantiğini ifade etmeye yarayan bir üst dile semantik üst dil pragmatikini ifade etmeye yarayan bir üst dile de "pragmatik üst dil" denir. Nesne dili ve üst dil ayrımına paralel olarak dilsel deyimlerin kullanılması (use) ile anılması (mention) arasındaki ayrım vardır. Dil diller nesnelere (nesnel-dilde) söz ettiğimizde, bu nesnelere dile getiren deyimleri kullanırız', buna karşılık bir dil bilgini veya filozof olarak, sıradan insanın veya bilim adamının kullandığı nesnel dil deyimlerini incelediğimiz zaman bu deyimleri kullanmaz, sadece anarız. Örneğin, 'bu masa beyazdır' önermesini evetlediğimizde ('masa' sözcüğü dil diller bir nesne olan bir masa hakkında söz

etme?e yarad???ndan) 'masa' sözcü?ünü kullan?yoruz. Öte yandan, "'Masa' dört harfli' dir" önemesini evetledi?imiz zaman ('masa' sözcü?ü bu ba?lamda bir masa hakk?nda de?il de, dilsel bir deyim olan 'masa' sözcü?ü hakk?nda bir bilgi vermeye yarad???ndan) 'masa' sözcü?ünü an?yoruz.

Parallel to the physical space in our world, there exists cyberspace. In the physical space, there are human and nature interactions that produce products and services. On the other hand, in cyberspace there are interactions between humans and computer that also produce products and services. Yet, the products and services in cyberspace don't materialize—they are electronic, they are millions of bits and bytes that are being transferred over cyberspace infrastructure. Composed of two parts, this book involved research on gender in the first part while the second part focused on research on culture. In the studies on different themes and problems, unique viewpoints were desired to be developed. Different faces of gender inequality were investigated and solutions were suggested. Moreover, various

dimensions of cultural phase were examined. The book aimed at contributing to these two fields specifically and current debates in social sciences in general. In August 1989, more than 700 Soviet algebraists and more than 200 foreign mathematicians convened in Novosibirsk in what was then the Soviet Union for the International Conference on Algebra. Dedicated to the memory of A.I. Mal'cev, the Russian algebraist and logician, the conference marked the first time since the International Congress of Mathematicians was held in Moscow in 1966 that Soviet algebraists could meet with a large number of their foreign colleagues. This volume contains the proceedings from this historic conference. Some of the Soviet contributors to this volume are not easily available from other sources. Some of the major figures in the field, including P.M. Cohn, P. Gabriel, N. Jacobson, E.R. Kolchin, and V. Platonov, contributed to this volume. The papers span a broad range of areas including groups, Lie algebras, associative and nonassociative rings, fields and skew

fields, differential algebra, universal algebra, categories, combinatorics, logic, algebraic geometry, topology, and mathematical physics. This book gathers the latest advances, innovations, and applications in the field of computational engineering, as presented by leading international researchers and engineers at the 24th International Conference on Computational & Experimental Engineering and Sciences (ICCES), held in Tokyo, Japan on March 25-28, 2019. ICCES covers all aspects of applied sciences and engineering: theoretical, analytical, computational, and experimental studies and solutions of problems in the physical, chemical, biological, mechanical, electrical, and mathematical sciences. As such, the book discusses highly diverse topics, including composites; bioengineering & biomechanics; geotechnical engineering; offshore & arctic engineering; multi-scale & multi-physics fluid engineering; structural integrity & longevity; materials design & simulation; and computer modeling methods in engineering. The contributions, which

were selected by means of a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations.
